

## What are the benefits of the Waterlase™?

### No Drills, No Needles, No Numbness - in most cases

- Heat and vibration are the causes of most of the discomfort associated with the drill. Since Hydrokinetic cutting does not transmit heat or vibration, **MANY DENTAL PROCEDURES CAN BE PERFORMED WITHOUT ANESTHESIA, IN MOST CASES.**
- The laser's pinpoint accuracy is precise enough that your dentist can leave as much healthy tooth structure as possible, allowing you to keep your own teeth longer. This is minimally invasive dentistry.
- Gently performs numerous soft tissue (gums) procedures with little or no bleeding. The laser gives your dentist a new high-tech tool for many procedures that previously required referral to a specialist. Now you can have them performed during your scheduled appointment and feel better afterwards!
- The Waterlase™ prepares your teeth in a way that maximizes the bonding of tooth colored fillings, allowing them to last longer.

### What can the Waterlase™ be used for?

- Root Canal
- Decay Removal
- Cavity Preparation
- Even gum line levels
- General soft tissue procedures
- General dentistry for enamel & dentin
- Avoid the shot & being "numbed"
- Non-surgical gum treatments

## Word of Mouth

A QUARTERLY NEWSLETTER TO THE PATIENTS & FRIENDS OF  
DR. STEVEN HUTT, D.D.S., P.A.

### Introducing...

#### Last Time You Pay Policy

Every cosmetic case is backed by our highly unique policy, which provides for the repair or replacement of every porcelain restoration.

It's all about...  
*Smile Confidence*  
for life!

### FDA Reconsiders Risk from Dental Amalgams (silver/mercury fillings)

"Dental amalgams contain mercury, which may have neurotoxic effects on the nervous systems of developing children and fetuses," the US Food and Drug Administration (FDA) stated on its website on June 3rd. "Pregnant women and persons who may have a health condition that makes them more sensitive to mercury exposure, including individuals with compromised immune systems, should not avoid seeking dental care, but should discuss options with their health practitioner."

## Signs of Tooth Erosion

The effects of tooth erosion cannot be reversed. When enamel is gone, it is gone forever. Severe damage may require teeth to be removed.

### Early Signs

- Sensitivity when consuming hot or cold foods and drinks
- A yellowish appearance as the tooth enamel thins
- A rounded “sandblasted” look on the surface of the tooth.

### Later Signs

- Transparency on the biting edge
- A darker, more yellow appearance
- Extreme sensitivity to hot and cold
- Small dents on the tooth surface

## Mini Dental Implant

Mini implants can be placed and your existing denture can be immediately fitted for instant stability. A miniature titanium implant acts like the root of your tooth, and a retaining fixture that is incorporated into the base of your denture keeps your denture solid with no movement. The head of the implant is shaped like a ball and the retaining fixture acts like a socket that contains a rubber O-ring. The O-ring snaps over the ball when the denture is seated and holds the denture. When seated, the denture gently rests on the gum tissue. The implant fixtures allow for micro-mobility while withstanding natural lifting forces.

## The Perfect Solution....

for those patients who have asked:

- How can I have straighter teeth?
- How can I have permanently whiter teeth?
- How can I replace misshapen teeth or fill gaps between my teeth?
- How can I have a brighter, more attractive smile?
- How can I fix chips, cracks & discoloration?

There is a solution for everyone's concerns.

## American Dental Association Message

An important message about oral cancer from the American Dental Association.

Now precancerous cells can be detected - years before oral cancer can start.

Ask about Vizilite early detection.
